PICT OSS Community

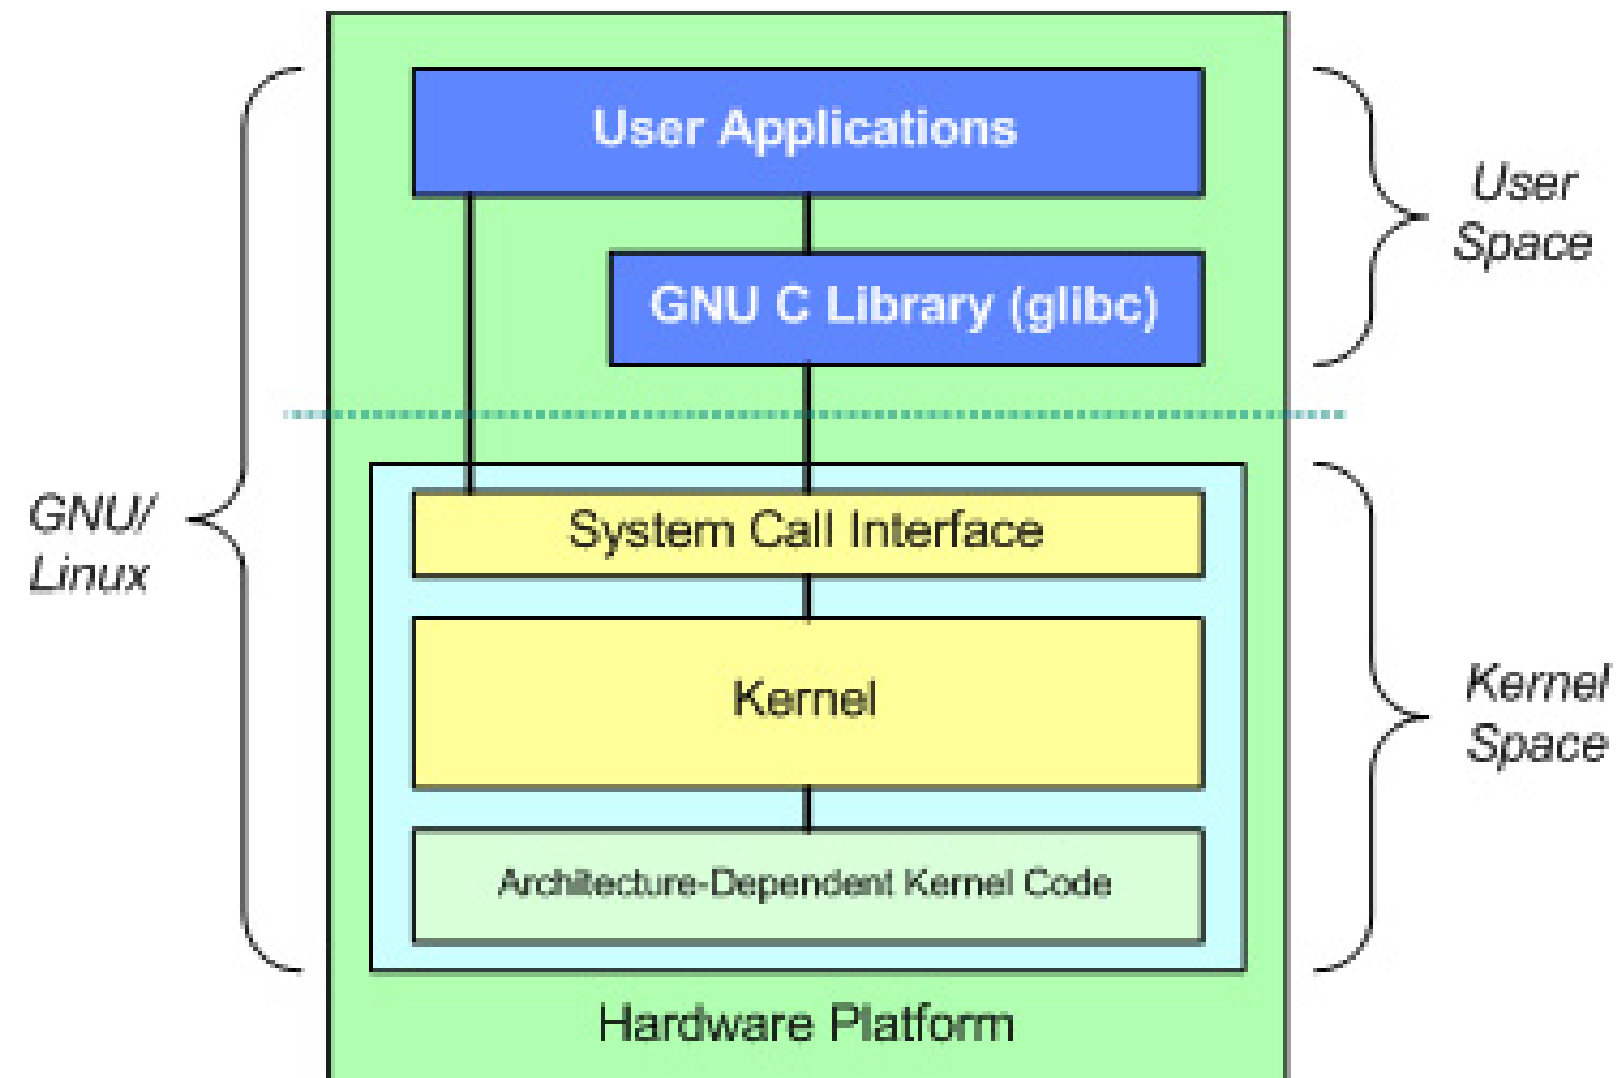

WHAT IS LINUX?

- Made by Linus Torvalds in 1991
- A family of Unix-like OSes using Linux kernel
- Also called GNU/Linux

GNU/LINUX

Linux is technically just a kernel, the entire OS includes GNU coreutils as well

WHY LINUX?

- Free (as in free beer and freedom)
- Open-source
- Security
- Customization, and much more

LINUX DISTRIBUTIONS

- Also known as Linux “distros”
- Collection of software packages and configurations
- Used in:
 - Web servers (96%+ share)
 - Embedded systems (Android, Raspberry Pi)
 - Desktops (4%+ share)

LINUX DISTRIBUTIONS

How to choose:

- Stability
- Package management
- Development philosophy, and more

OR just use Ubuntu/Linux Mint

INSTALLING UBUNTU

BASIC STEPS:

1. Install ISO
2. Flash ISO on USB
3. Boot from USB
4. Install
5. Enjoy!

INSTALL ISO

- ISO: Container for files/folders of the distro
- *.iso file
- Usually found on the distribution's website

FLASH ISO ON USB

- Use software like Rufus for Windows
- WARNING: All contents previously stored on USB WILL be permanently erased!
- NOTE: For Ubuntu, around 8 GB storage is recommended.

BOOT FROM USB

- Restart your device, then press a particular key while booting to enter Boot Menu.
- The key depends on manufacturer (HP, Lenovo, etc.)
- Usually Esc or F1-F12 keys

OR

- Boot into USB from Windows Settings

BOOT FROM USB

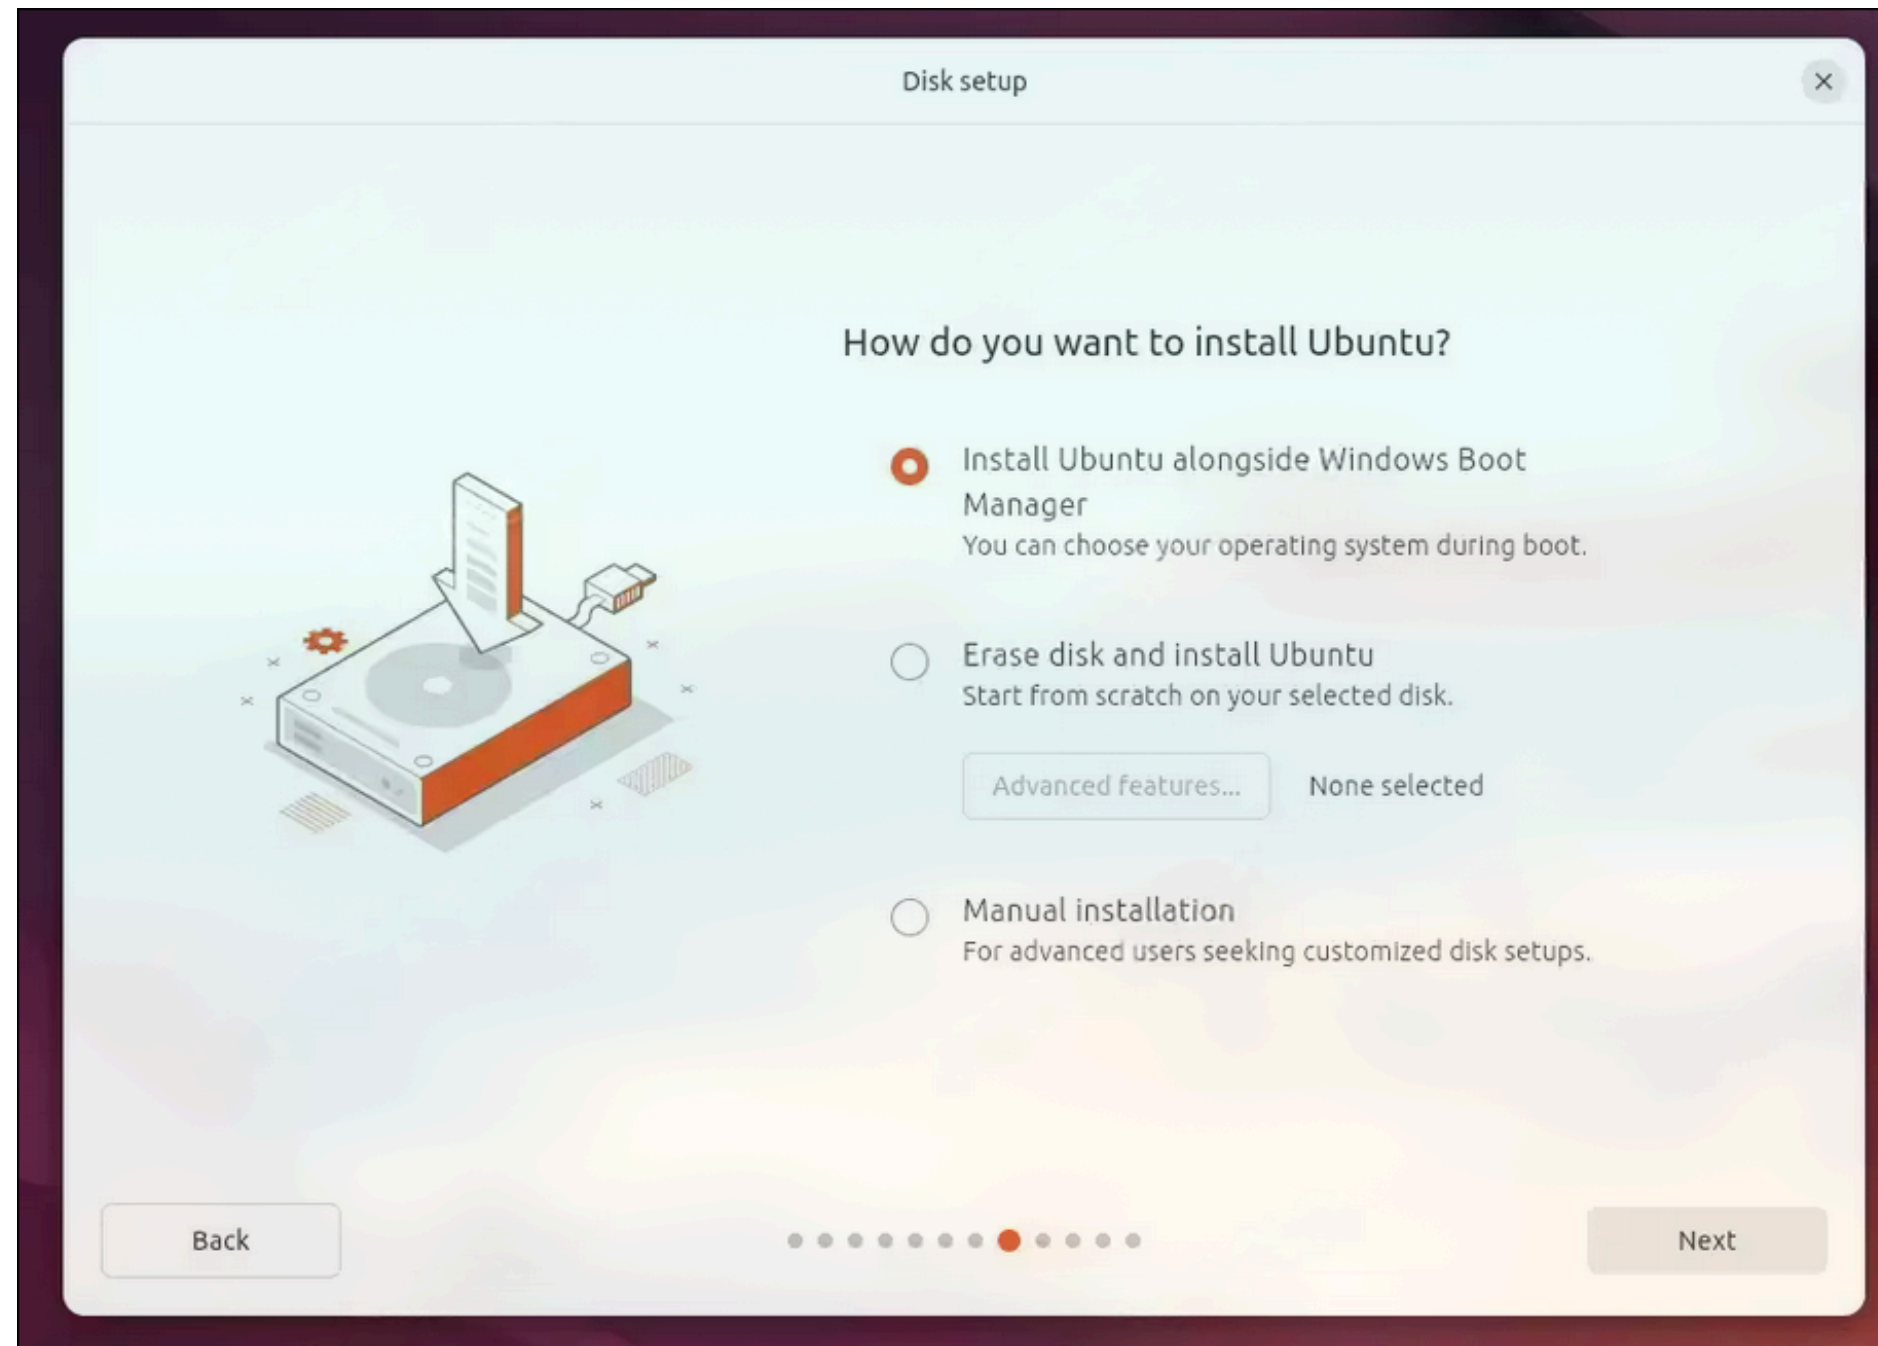

Boot Menu example

INSTALL

- Go through installation wizard
- Set up basic configuration like keyboard layout, language, Wi-Fi, etc.

INSTALL

Ubuntu gives you option to install alongside Windows

INSTALL

Partitions:

- EFI: Necessary for boot-loading OSes (~1 GB)
- Swap: Helpful in case RAM gets used up (~4 GB)
- Root: All files (all remaining space)

[illegible]

Create account

INSTALL

Installation done; press Restart Now

INSTALL

Please remove the installation medium, then press ENTER:

INSTALLED

WHAT NEXT?

Learn to use terminal effectively

- Learn, understand basic commands (ls, mkdir, rm, etc.)
- Use manpages, output redirection, piping, operators
- Relying on keyboard increases productivity/speed
- <https://fmhy.net/linuxguide#cli-cheat-sheets>

WHAT NEXT?

Learn to install/update packages

- Learn about your distribution's package manager
- Learn to install and update packages regularly
- Learn to use Flatpak, Snap, AppImage, etc.

WHAT NEXT?

Use alternative open-source software

- MS Office: LibreOffice
- File Managers: Nautilus, Dolphin, Thunar, etc.
- Text Editors: gedit, nano, vim, etc.
- Software Management: Ubuntu Software, Snap Store

WHAT NEXT?

Keep learning!

- Don't hesitate to ask for help
- Keep up-to-date about other alternatives/technologies
- Ask any (future) doubts in OSS Help Group

THANK YOU
